

MAESTROLOTO

SKU:MLK19YG

- **CATEGORY:** Circuit Breaker Yellow Green
- **TYPE:** Breaker Lock
- **Color:** Yellow/Green&Yellow
- **MATERIAL:** ABS & PA
- **Quantity:** Pcs

Product Features

- Full Shield's circuit breaker set locks are ideal for oversized or irregularly shaped switches. Used in conjunction with self-adhesive back rails to mount the barrier strip system to the switchboard.
- The different color-coded levers will indicate where the device is locked, usually: a red lever means the switch is off, and a green lever means the switch is on.

Product Description

- The kit for the switch lock includes: 2 yellow mounting rails, 1 red bar, 1 green bar.
- The yellow rails are part of the locking rail system and allow the crew to secure the circuit breaker by passing the stop rod through the locking rails.
- The circuit breaker lock group system is available for a wide range of circuit breakers, including single and multi-pole configurations.
- Locking rails work with most padlocks and can be permanently secured anywhere on the panel.
- Safety padlocks and circuit breaker lock sets are sold separately.
- The switch group lock allows the panel door to be closed while the locking device is in place and fits multiple locks without the need for a group hitch.

Product Dimension

Lock body color	Red, yellow, and green
Lock body size	Measurements are required
Lock body material	Engineering plastic ABS
Lockable maximum handle thickness	Large/extra-large circuit breakers, irregular circuit breaker switches
Maximum usable lock beam diameter	7mm
Lock type	-
wrap	Carton packing
Type of risk	Electrical Risks

Application scenarios.
